Backend: Node.js , Express.js
Database: MongoDB , MySQL

COURSEWORK / SKILLS

- Data Structures & Algorithms
- Operating Systems
- OOPS Concept
- DBMS
- Web Development

PROJECTS

Hotel Management App  | React.js , TailWindCSS , Express.js , MongoDB , Razorpay

- Built and optimized property listing and booking systems, enhancing functionality and user engagement.
- Created a responsive front-end using HTML, CSS, and JavaScript frameworks to ensure seamless navigation across devices.
- Developed a robust back-end using Node.js and Express to handle server-side logic, API integration, and database management with MongoDB.
- Integrated Razorpay payment gateway for efficient and secure transaction processing.

LearnEase  | React.js , TailWindCSS , Express.js , MongoDB

- Implemented secure authentication and authorization with role-based control for users and admin using JWT (JSON Web Tokens) and bcrypt for secure login and registration processes.
- Enabled users to view, purchase, and track courses, while admins can upload courses, set prices, and monitor sales analytics.
- Built a scalable backend with Node.js and Express.js, managing API requests and integrating with MongoDB for data storage and retrieval.

Blood Donation  | HTML, CSS , JavaScript , PHP, SQL

- Implemented features to view the nearest blood donation camp locations and available blood categories to facilitate easy access to donation opportunities.
- Enabled users to easily find and access information about blood donation camps and blood types, improving user engagement and accessibility.

CERTIFICATIONS

- SQL - **HackerRank**
